

MRCPUK Part 2 Clinical Examination performance report 2022

The MRCPUK Part 2 Clinical Examination (Practical Assessment of Clinical Examination Skills - PACES) is designed to test the clinical knowledge and skills of trainee doctors who hope to enter higher specialist training (ST3). The examination sets rigorous standards to ensure that trainees are competent across a range of skills and ready to provide a high standard of care to patients. To pass PACES, candidates must achieve a minimum standard in each of the seven skills assessed and attain a minimum total score of 130 across the whole assessment.

In 2022 6,376 candidates sat the MRCPUK Part 2 Clinical Examination; 2,838 declared that they are in UK training while the candidates who did not declare their training details (3,538) are reported as 'other candidates'. From 2022, UK trainees self-declared as OTH (Other) were excluded from UK trainee group.

Pass rate and performance by attempt

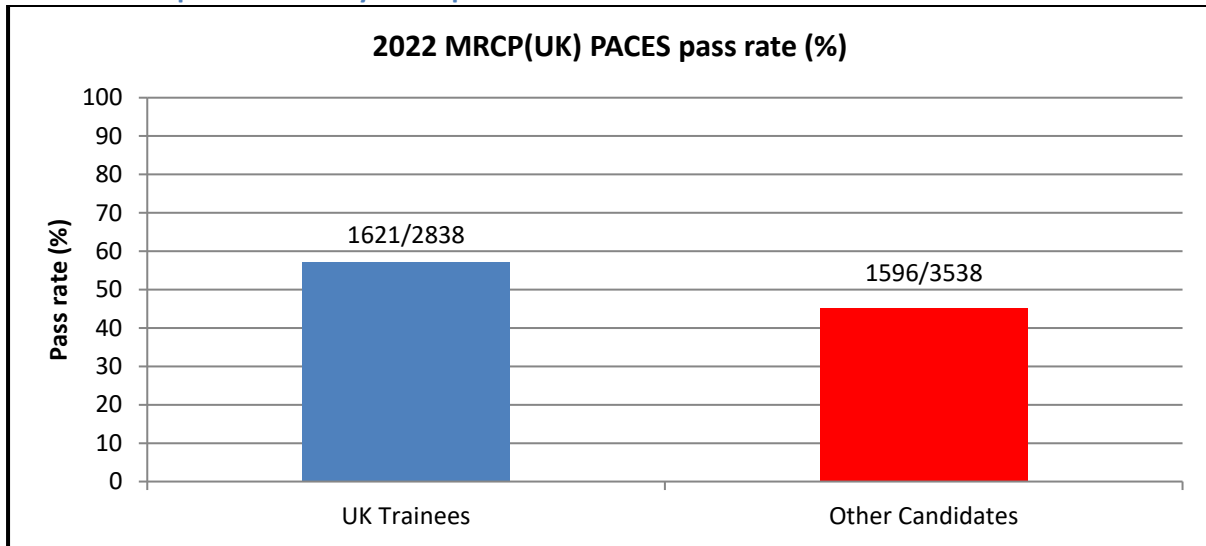

Figure 1. Pass rates for UK trainees and other candidates. Note that training details are self-declared.

UK trainees' pass rate at first attempt = 58.1% (1033/1779)

Other candidates' pass rate at first attempt = 46.5% (939/2020)

UK trainees					Other candidates				
Attempt	Pass	Fail	Total	Pass rate (%)	Attempt	Pass	Fail	Total	Pass rate (%)
1	1033	746	1779	58.1	1	939	1081	2020	46.5
2-6	582	463	1045	55.7	2-6	638	830	1468	43.5
7+	6	8	14	42.9	7+	19	31	50	38.0
Total	1621	1217	2838	57.1	Total	1596	1942	3538	45.1

Table 1. Pass/Fail rates by Attempt for UK trainees and other candidates. Candidates will be counted multiple times if they have sat on more than one occasion. For example if a candidate failed at the second attempt but passed on the third, they would be in the fail column for the second attempt but pass column for the third attempt.

More information about the limit on the number of attempts can be found on the MRCPUK website: <https://www.mrcpuk.org/mrcpuk-examinations/regulations/limit-attempts>

Pass rate and performance by gender and ethnicity

Figure 2. Pass rates for UK trainees and other candidates by gender and ethnicity. Note that the percentages are calculated using scores from all attempts made at the examination.

Female candidates have higher pass rates than Male candidates and White candidates have higher pass rates than BAME, for both UK trainees and Other candidates.

Pass rate and performance by skill

The seven skills are:

- A Physical Examination
- B Identifying Physical Signs
- C Clinical Communication
- D Differential Diagnosis
- E Clinical Judgement
- F Managing Patients' Concerns
- G Maintaining Patient Welfare

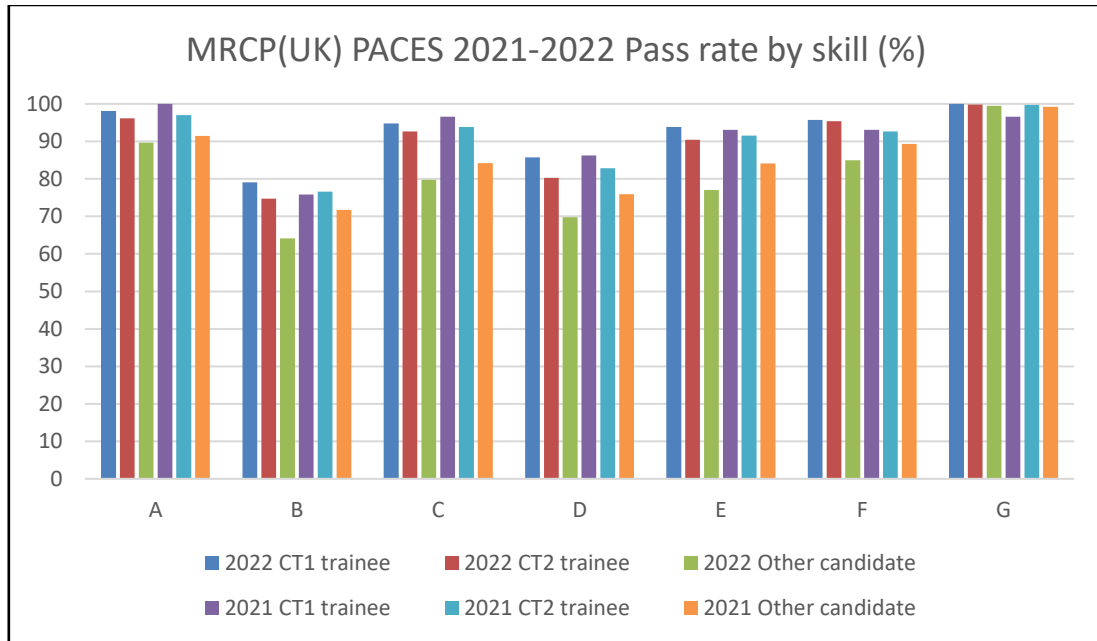

Figure 3. Performance by skill for CT1 and CT2 UK trainees and other candidates. Note that the percentages are calculated using scores from all attempts made at the examination.

Skill G – Maintaining Patient Welfare - has the highest pass rate

Skill B – Identifying Physical Signs - has the lowest pass rate

Performance by individual encounter

There are eight patient encounters across the five stations in PACES.

Station	Encounter
1	1: Respiratory 2: Abdominal
2	3: History Taking
3	4: Cardiovascular 5: Nervous System (Neurological)
4	6: Communication skills and ethics
5	7 & 8: Brief Clinical Consultation 1 & 2

Compared to the maximum achievable score, in 2022 the mean of the communication encounter 6 (Station 4) has the smallest difference for CT1, CT2 trainees and other candidates. Also in 2022, encounter 2 (Station 1) has the highest difference for CT1 trainees, encounter 2 (station 2) and encounter 4 (station 3) has the highest difference for CT2 trainees, while for other candidates encounter 7/8 (Station 5) has the highest difference.

Figure 4. Performance by encounter for CT1 and CT2 UK trainees and other candidates. Note that the average scores are calculated using scores from all attempts made at the examination.
